

# API НОРСО

[ТОС]

## User

Конечные точки /me позволяют вам управлять информацией об аутентифицированном пользователе.

### GET Get authenticated user

Получает информацию о аутентифицированном пользователе.

Пример

Успешный запрос

Request

cURL`

```
`curl --location 'https://api.getpostman.com/me`
```

200 OK

Response

- Body

```

}
```

## Collections

### POST Create a collection

Создает коллекцию, используя формат схемы Postman Collection v2. Включите в тело запроса объект коллекции, содержащий следующие обязательные свойства:

- info — Объект, который содержит следующие свойства:
- name — Строковое значение, содержащее имя коллекции.
- schema — строка, содержащая URL-адрес схемы коллекции. Например, URL-адрес <https://schema.getpostman.com/collection/v1>.
- item — Объект, содержащий информацию HTTP-запроса и ответа.
- request — Объект, содержащий информацию о запросе коллекции. Полный список значений см. в записи Definitions.request в файле схемы Collection.json. Если в качестве этого значения вы передаете пустой объект, система по умолчанию использует запрос GET без названия.

Примечание:

Чтобы получить полный список доступных значений свойств для этой конечной точки, используйте следующие ссылки, доступные в файле схемы Collection.json:

- info-объект — используйте запись Definitions.info.
- Объект элемента — используйте запись Definitions.items.

Все остальные возможные значения см. в файле схемы Collection.json.

### Параметры запроса

Рабочее пространство {{идентификатор рабочего пространства}} Необязательный. Идентификатор рабочей области, в которой необходимо создать коллекцию.

Если вы не включите этот параметр запроса, система создаст коллекцию в вашей рабочей области «Моя рабочая область».

- Body

```
{  `
  ` "collection": {  `
    ` "info": {  `
      ` "name": "{{collectionName}}",  `
      ` "schema": "{{collectionSchemaUrl}}"  `
    },  `
    ` "item": [  `
      {  `
```

```
    "request": {}
  },
}
```

## Пример

### Успешный ответ

- Запрос

```
curl --location 'https://api.getpostman.com/collections' \
--header 'Content-Type: application/json' \
--data '{
  "collection": {
    "info": {
      "name": "Test Collection",
      "description": "This collection makes a request to the Postman Echo service to get a list of request headers sent by an HTTP client.",
      "schema": "https://schema.getpostman.com/json/collection/v2.1.0/collection.json"
    },
    "item": [
      {
        "name": "Test GET Response",
        "event": [
          {
            "listen": "test",

{
  "error": "rateLimited",
  "message": "Rate limit exceeded. Please retry after 1669048687"
}
```

- Headers (1)

Content-Type application/json

## PUT Update a collection

Обновляет коллекцию, используя формат схемы Postman Collection v2. Включите в тело запроса объект коллекции, содержащий следующие обязательные свойства:

- **info** — Объект, который содержит следующие свойства:
  - **name** — Строковое значение, содержащее имя коллекции.
  - **схема** — строка, содержащая URL-адрес схемы коллекции. Например, URL-адрес <https://schema.getpostman.com/collection/v1>.
- **item** — Объект, содержащий информацию HTTP-запроса и ответа.
  - **request** — Объект, содержащий информацию о запросе коллекции. Полный список значений см. в записи Definitions.request в файле схемы Collection.json. Если в качестве этого значения вы передаете пустой объект, система по умолчанию использует запрос GET без названия.
- **Примечание:** Чтобы получить полный список доступных значений свойств для этой конечной точки, используйте следующие ссылки, доступные в файле схемы Collection.json:
  - **info-объект** — используйте запись Definitions.info.
  - **Объект элемента** — используйте запись Definitions.items.
- Все остальные возможные значения см. в файле схемы Collection.json.

**Важно** Будьте осторожны при использовании этой конечной точки. Система заменит существующую коллекцию значениями, переданными в теле запроса.

### Body raw (json)

```
{
  "collection": {
    "info": {
      "name": "{{collectionName}}",
      "schema": "{{collectionSchemaUrl}}"
    },
    "item": [
      {
        "request": {}
      }
    ]
  }
}
```

**\*\*Пример \*\***

- **Запрос**

Successful Response

```
curl --location --request PUT 'https://api.getpostman.com/collections/12ece9e1-2abf-4edc-8e34-de66e74114d2' \
